EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. David N. Fogs on 12/30/2008.

Claims 1-7, 8, 9-12, 14-19 and 48 have been canceled. .

REASONS FOR ALLOWANCE

2. The following is an examiner's statement of reasons for allowance:

Claims 20-34, 36-47 are considered allowable since when reading the claims in light of the, specification none of the references of record alone or in combination disclose or suggest the combinations of limitations specified in the independent claims. As to claims 20-25, the prior art of record does not teach a first transmission convergence layer associated with the first packet-based communication device and a second transmission convergence layer associated with the second packet-based communication device, the first and second transmission convergence layers configured to automatically adapt to a statically varying packet size based on packets received at the respective first and second packet-based communication devices. As to claims 26-30, the prior art of record

Art Unit: 2416

does not teach receiving a stream of bytes from the physical medium; identifying an expected packet size based on the received bytes; counting N additional packets that match the expected packet size; entering a sync state based on receiving the N additional packets; monitoring packet size of packets received in the sync state; and when M packets vary from the expected packet size, exiting the sync state.

As to claims 31-34, the prior art of record does not teach receiving a stream of bytes over a physical medium; determining a static packet size from the bytes in the stream of bytes; using the determined packet size to process packets from the received byte stream; and re-determining the packet size after a selected number of errors in the processing of packets. As to claims 36-42, the prior art of record does not teach identifying a first boundary; identifying a second boundary; determining the statically varying packet size based on the first and second boundaries; identifying an additional N boundaries based on the determined packet size; and entering a sync state based on the identification of the additional N boundaries.

As to claims 43-47, the prior art of record does not teach a packet size calculator, responsive to the stream of bytes, the packet size calculator adapted to calculate and store an expected packet size based on the received bytes and to generate a signal indicating the expected next packet boundary; and a synchronization circuit, responsive to the signal indicating the next boundary and the signal indicating the expected next boundary, that is adapted to count N consecutive valid boundaries to enter a sync state and to count M consecutive missed boundaries to exit the sync state. Any comments considered necessary

Art Unit: 2416

by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
